**Innovative Hang-n-Nail® Professional Siding Hanger  
Cuts Labor by Two-Thirds for Most Jobs**

**Patented Cement Board Hanger System Allows One Worker to Complete  
Even Toughest Siding Projects While Virtually Eliminating Board Breakage**

**Chicago...**Commercial siding contractors and construction professionals can now complete almost any cement board siding project with just one set of hands – saving thousands of dollars in labor costs – thanks to the innovative Hang-n-Nail® hanger system from ALLYNRehm Company.

The Hang-n-Nail system utilizes a patented lap-gauge hanger technology to eliminate the need for additional workers to hold, adjust and fasten any size of cement board siding in most residential and commercial applications. Unlike existing hanger systems, Hang-n-Nail also dramatically reduces the time and complexity of door and window cutouts and virtually eliminates board breakage for a more profitable and professional result.

The easy-to-use system enables the user to position and hold each cement board for a precise 1-1/4-inch overlap and flawless siding lines in virtually any application. Each robust Hang-n-Nail hanger can easily carry loads of more than 150 pounds during installation.

“I have hung a lot of cement board, and broken my fair share,” said one satisfied user. “I can honestly say that the day I received my (Hang-n-Nail) hangers my crew only broke one piece all day, and that was because we did not know how to use the hangers correctly. This is by far well worth the cost!”

For additional information regarding the Hang-n-Nail system, including downloadable user guide and online video, please visit [www.hangnnail.com](http://www.hangnnail.com). Shipment of online orders is guaranteed within 24 hours.
